ORGANIC MILE

SUSTAINABLE INDUSTRIAL FUELS

PRODUCT INFORMATION

POLY-FUEL PRODUCT RANGE

Industrial fuel alternatives for compatible heating applications.

Product photographs, product positioning and key information.

POLY-FUEL A52

FURNACE OIL ALTERNATIVE

High-performance industrial fuel alternative for applications traditionally using Furnace Oil.

Designed for compatible boilers, furnaces and industrial heating applications.

POLY-FUEL A60

LDO ALTERNATIVE

Treated industrial fuel alternative for compatible applications traditionally using LDO.

Engineered for stable performance in compatible industrial heating applications.

Product suitability depends on the equipment, operating conditions and fuel handling setup.

ORGANIC MILE

TECHNICAL PROFILE

Specifications, advantages and applications

Poly-Fuel range | target specification ranges

TARGET SPECIFICATIONS

PARAMETER	TARGET RANGE
Gross Calorific Value (GCV)	**9,000 - 11,200 Kcal/kg**
Density (at 15C / 30C)	**0.75 - 0.95 g/cm3**
Flash Point	**46C - 100C**
Viscosity (at 40C / 50C)	**1.98 - 20 cSt**
Sulphur Content	**< 1.0%**
Ash Content	**< 0.1%**

KEY ADVANTAGES

High calorific value

Supports efficient heating performance.

Low sulphur content

Helps reduce sulphur-related emissions.

Heavy metals absent

As stated for the product feedstock.

Minimal maintenance

Lower viscosity and reduced soot can help reduce burner maintenance.

No pre-heating required

Steam heating / pre-heating not required for suitable applications.

Increased efficiency

Designed to support boiler and furnace efficiency.

APPLICATIONS & INDUSTRIES

Core applications

Hot air generators | Boilers | Furnaces | Industrial heating

Industries served

Casting | Cement | Road works | Construction | Recycling | Sponge iron

IMPORTANT

Ranges are indicative targets for the Poly-Fuel range; actual values may vary.
Confirm current batch analysis and application compatibility before use.

For technical data, current certificates or application guidance, contact Organic Mile.
